

GAS JAR WITH COVER

A gas jar is used in microbiology. A flame is lit in the airtight jar which starts using up the oxygen in the jar and producing carbon dioxide. This creates an environment that is lower in oxygen than the normal atmosphere and creates a perfect environment for microaerophilic microbes which need a low concentration of oxygen in order to grow.

CODE	SIZE
GL-G0001	150x50mm
GL-G0002	200 x50mm
GL-G0003	200x60mm
GL-G0004	250x50mm
