

**AA-M0056**

## **SMALL MOTOR ELECTRIC, 1.5-3.0V D.C.**

- A range of low voltage d.c. electric motors.
- All have cylindrical bodies with metal.
- Electrical connection is by solder tags on the rear end clips
- Suitable for science and technology experiments, robots, automation and more.

Generator works on Faraday's law of electromagnetic induction. When coil is rotated in a magnetic field by some mechanical means magnetic flux is changed through the coil and consequently EMF (Electromagnetic Field) is induced in the coil
