

AA-P0059

PUMP FORCE

Features:

- Working model made of glass.
- Demonstrates the working principle of the force pump, concept of double valve action of the pump and its ability to eject water at high pressure.
- Comprises a glass cylinder with a non-return float valve at its lower end, which also has an outlet side tube at its lower end, that in turn communicates the lower end of a secondary cylinder also equipped with a non-return float valve.
- The outlet tube from a secondary cylinder is drawn out into a jet.
- Borosilicate Glass
